Rule M-10-5

Highwalls:

Highwalls of solid rock will prevent cutting the wall back to achieve a 45% slope angle. No material for back fill will be available. It is therefore requested that the Division waive the requirements of Rule M-10-5 in view of the factors explained.

Rule M-10-12

Revegetation:

The operator requests that the Division grant an exception to this rule for those areas of the operation which will consist of solid rock outcrops remaining after mining. Insufficient surficial soil does not exist for covering said outcrops. The operator understands that the revegetation requirements of this rule do apply to those areas of the operation which will not consist of solid rock outcrops.
